

Read through the following steps to understand the data format.

Instrument Specifications

- Frequency bandwidth = 180 MHz - 360 Mhz
- Sampling rate (ADC rate) = 1.25GS/s
- ADC resolution = 8bit
- Baseline = 6 m

Data is saved in 2 formats; Raw and Combined

Raw

- Each CSV file has 4 columns
- Column 1 and Column 2 consists of data from 1st and 2nd element
- Name of the CSV file contains the date and time stamp (Time in IST)

Combined

- Column 1 consists date and time (Time in UT)
- Column 2 till Column 9953 consists of data from 1st element
- Column 9954 till Column 19905 consists of data from 2nd element

To display a spectrograph you can run two python programs

1. twin_data_process_raw.py
2. twin_data_prcoess_combined.py
